INTRODUCTION

Games of all kinds can be exciting, competitive, and extremely fun. Cryptocurrency and blockchain have unconventionally carved a niche in the gaming sector due to its attractive ability to integrate them into their networks. Fantasy style games in particular have also become quite attractive to users looking to focus more on prediction and guessing based games using real time data or events to coordinate competition. This is seen in fantasy sports in the athletic world and has even been applied to other forms of entertainment to make things more interesting.

The team at CryptoGamez is looking to bring the gaming and prediction markets together to create a platform that allows users to test their luck at making calls on various markets, sporting events, and other forms of entertainment. The CryptoGamez platform will be released across three smart chains initially, with them being Binance Smart Chain, Ethereum, and Tron.

PRODUCT OVERVIEW

04

Rewards for Participation & Winning

Our price prediction and sports/event prediction platform will feature the following:

03

Live event outcomes for other forms of competitions like reality TV, Gaming, and more

02

Sporting event outcomes, statistical predictions, score predictions etc

01

Cryptocurrency price and asset performance

CRYPTOGAMEZ EXPERIENCE

Users will find it **easy** to earn and play with CryptoGamez. Our featured UI is simple to use and will allow anyone to make their own predictions or calls across the various options we will have listed now and in the future.

When playing our games:

- Users will simply earn cash back just for playing. Our goal is to create a fair and transparent way for users to play and win. Sometimes we all have a bad day on the court. Never worry about coming away empty handed for wanting to have some fun.
- Winning is the ultimate goal and has lucrative rewards based on your risk level. Actively predict outcomes to earn based on the results of your calls.
- Earn off calls on statistical outcomes of individuals, teams, and more.
- By completing achievements and challenges, bonuses and other rewards are offered for your active contributions to the network.

CRYPTOGAMEZ DASHBOARD

Those playing and predicting on CryptoGamez will have easy access to their overall performance levels. Our innovative player dashboard will keep you updated on the status of your calls and your past history. This will allow you to trend and analyze your past successes and failures to further strategize and plan your next move. It also allows our dashboard to act as a mock trading platform, allowing you direct access to cryptocurrency market cap information to keep you on your toes.

CHANGE THE WAY YOU EXCHANGE & TRADE

Our in house Automated Market Maker will make it simple and easy to trade and swap the CryptoGamez native token with other assets. The AMM will keep users local and in the platform allowing for a more simplified user experience.

We are also releasing a bot that will allow users to set stop losses and bids along directing the bot when to the profit or migrate a percentage of your portfolio to another asset. Keeping users in the game is also a strong part of our mission.

Trading can be extremely difficult and daunting. Making and losing money causes a shift of emotions that can cause irrational decision making or quick uncoordinated calls. This is a recipe for disaster and the team at CryptoGamez wants to keep users informed and educated with its tools and guides.

THE CRYPTOGAMEZ ADVANTAGE

The markets in cryptocurrency are quite competitive and many of those reading this paper may ask how we are poised to compete with other platforms hosting similar services. The answer is quite simple:

-Our partnerships with an established Launchpad and marketing group that has helped advise and integrate over 100 projects collectively puts us in a massive web of intertwined networks, users, developers, and utility tokens. The possibilities are endless at CryptoGamez as we build and expand our capabilities across even more smart chains and add new games and ways to earn cryptocurrency

-The development team has created a platform that can meet the end users expectations while solving glaring problems with existing competitors. Many of these problems include transparency and provably fair games. One of our main goals is to provide fair gaming and rewards to our users to keep them playing and earning to their liking.

CRYPTOGAMEZ TOKEN

CGAZ Token will be the featured Token on the CryptoGamez Platform. It will act as a facilitator of exchange between users and CryptoGamez games and trading tools on the exchange. It will also be used as a staking, yield farming, and governance token that can be used to participate in project governance and to receive passive income on your idle crypto.

The CryptoGamez platform and token will feature multiple liquidity pools and will be featured across the Tron, Ethereum, and Binance Smart Chains. This also means that you will have increased exposure to upcoming liquidity and staking pools from assets featured on all 3 platforms. The amount of future utility this platform can generate is endless and our innovation will always continue to help you make the most of your experience.
